

SERVICES

PROJECT MANAGEMENT AND WELLSITE CONSULTING

HXR's Extended Reach Drilling (ERD) division provides Project Management and Wellsite Consulting services and personnel to operators throughout the United States. More than a "body shop", HXR provides engineers and drillsite managers that are trained specifically in ERD, horizontal and deepwater drilling operations. Conventional consulting companies provide the client with an individual. Period. No input into the operation, no basic supervision, not even the benefit of cumulative years of experience handed down through their organization in the form of lessons learned. HXR's Engineers and DSM's work together, as well as with our clients, to successfully deliver the most difficult wells, using not only decades of hands-on drilling experience, but also some of the most advanced engineering services available. Our personnel work seamlessly with the various downhole tool and service vendors to ensure that the equipment and techniques used on our clients' wells are fit for purpose. We specialize in the following types of drilling operations:

- Horizontal and Extended Reach Drilling
- Deepwater Drilling
- Arctic Drilling
- Unconventional Resource Development

Our personnel are drawn from operators and service companies with global experience. Some of our areas of operation include:

- U.S. Land (including Bakken, Eagle Ford, Marcellus, Granite Wash, Niobrara, Barnett, Haynesville)
- Alaska (including Schrader Bluff, Sag and West Sak ERD, plus various projects in the Cook Inlet)
- West Africa Deepwater
- North Sea ERD projects
- Gulf of Mexico Shelf and Deepwater
- Middle East ERD projects (including Zuluf Offshore, Qatif ERD)

HXR can handle all phases of your drilling operation, from approval for expenditures (AFE) and pre-drill workups/permitting, through advanced office-based design engineering, to drilling supervision and rigsite engineering. We provide the following personnel to our clients:

- Drilling and Completions Engineers
- Drilling Superintendents
- Drilling and Completions Supervisors
- Drilling Specialists (engineering specialists in various disciplines, such as fluids, ERD, directional drilling)
- Pore Pressure Specialists

All of our personnel are hand-picked by our management team to ensure that they are capable of meeting the rigorous challenges our clients' more difficult wells throw at them. We provide them with the specialized training they need to get the job done right.

OPERATIONS MAP

Call HXR before you start your next drilling project. From the North Slope to the South China Sea, we can help. We're good at it.
